## **Diamond Drilling Underway On Meridian Gold – Silver Project**

Manson Creek Resources Ltd. ('Manson Creek') is pleased to announce that mobilization has been successfully completed and that diamond drilling is now underway on its Meridian gold – silver project, located near Revelstoke, British Columbia.

The planned diamond drill program consists of 1,500 meters (m) of core drilling that will target subsurface extensions of gold and silver bearing veins that were briefly mined in the early 1900's. Surface and sub-surface sampling by Company personnel has shown widespread mineralization that has not been examined in recent times.

### *Background*

Manson Creek has consolidated 5 historic past producing gold – silver mines on the current, road accessible, 675 hectare claim block. The Meridian Camp was active in the early 1900's but the fragmented land ownership at the time did not allow for growth and the camp faded after only a few years of production.

The Company believes that the potential for significant mineralization is high in areas near and below the limited historic mine workings. Gold and silver mineralization on the block is found within and proximal to quartz veins related to the regional scale Camborne Fault which bisects the Meridian Claim group and hosts many of the historic deposits.

The drill program is anticipated to take four to five weeks to complete and samples will be shipped to the EcoTech Laboratory, located in Kamloops, British Columbia, for assay analysis. Assay results are expected to be available 4 – 6 weeks after the samples are received by the lab.

The Qualified Person responsible for the design and implementation of the Field Program as well as the preparation of this news release was the President of the Company, Regan Chernish, P.Geol.
