New President Appointed

Manson Creek Resources Ltd. is pleased to announce that it has appointed Mr. Regan Chernish, P. Geol., as President of the Corporation. Mr. Chernish has had an ongoing consulting role with Manson Creek since 2001 and worked as a director of the Corporation since 2002. He has also served as the VP exploration for Tyler Resources Inc. for several years.

Mr. Chernish brings a hands-on approach to the Corporation's exploration programs and operations. This focus is based on a wealth of exploration experience spanning 13 years of work in Nunavut, Northwest Territories, Yukon, British Columbia, and Mexico. Prior to consulting to the Company, he was the Project Geologist for Diavik Diamond Mines Inc from 1997 to 2001. Mr. Chernish has had varied tenures as a production geologist at the Diavik, Ekati, and Giant mines in Northern Canada.

The Company wishes to extend its heartfelt thanks and appreciation to Mr. Devonshire for his service to the Company as President. Mr. Devonshire continues to be a valuable member of the Manson Creek Board of Directors.

Manson Creek is a well financed active explorer in British Columbia and the Yukon. The Company is looking forward to the upcoming field season on the CR Copper-Molybdenum Porphyry Project in British Columbia. The 2005 exploration season will begin in May with a detailed soil sampling program to further delineate the copper soil anomalies discovered in the 2004 program. Detailed geophysics, prospecting and diamond drilling will follow in the summer months.

The geochemical and geophysical grids will be extended and infill lines will be added to further define the anomalies outlined in the 2004 program. Diamond drilling will investigate several new zones of anomalous copper values identified in the 2004 soil sampling program and test areas containing historic anomalous copper and molybdenum intercepts.

The Company is also currently evaluating other promising exploration opportunities in British Columbia and the Yukon.
